

Special Issue on Protein Purification

Call for Papers

This special issue on “**Protein Purification**” will be focusing on the latest development in protein purification. Protein purification is a series of processes intended to isolate a single type of protein from a complex mixture. The starting material of protein purification is usually a biological tissue or a microbial culture. The various steps in the purification process may free the protein from a matrix that confines it, separate the protein and non-protein parts of the mixture, and finally separate the desired protein from all other proteins. Methods of protein purification include ultracentrifugation, chromatography, HPLC, and so on. As one of the most important research fields of biology research, **protein purification** is of great attractions to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **protein purification**. Potential topics include, but are not limited to:

- Physico-chemical properties of protein
- Binding affinity of protein
- Peptide mass fingerprinting
- Protein identity
- Proteolysis
- Metal binding protein
- HPLC purification

Authors should read over the journal’s [Authors’ Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Protein Purification**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	April 30th, 2014
Publication Date	June 2014

Guest Editor:

Scientific Research
Open Access

**Advances in Bioscience
and Biotechnology**

ISSN Online: 2156-8502
