

Special Issue on Protein Separation and Purification

Call for Papers

Protein purification is a series of processes to isolate proteins from a complex mixture, which is vital for the characterization of the function, structure and interactions of the protein. The methods used in protein purification can roughly be divided into analytical and preparative methods according to the amount of protein purified. As **Protein Separation and Purification** plays an important role in bioscience and medicine, further study is of great importance to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **protein separation and purification**. Potential topics include, but are not limited to:

- Characteristics of protein
- Purification Strategies
- Concentration of the purified protein
- Involving techniques
- Application
- Limitation and common problems

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue –Protein Separation and Purification**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 30th, 2015
Publication Date	August 2015

Guest Editor:

Scientific Research
Open Access

Advances in Bioscience and Biotechnology

ISSN Online: 2156-8502
