

Special Issue on Archaeological Science

Call for Papers

Archaeological Science is an interdisciplinary field that applies scientific methods and advanced technologies to investigate the human past through archaeological materials and sites. It integrates disciplines such as chemistry, biology, geology, physics, and environmental science to analyze artifacts, human and animal remains, ancient landscapes, and cultural heritage. Using techniques including radiocarbon dating, ancient DNA analysis, isotopic studies, remote sensing, and geospatial technologies, archaeological science enhances the understanding of chronology, human evolution, past environments, migration, diet, technology, and cultural interactions. The field plays a vital role in preserving archaeological heritage while providing robust scientific evidence to reconstruct ancient societies and their development.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Archaeological Science**. Potential topics include, but are not limited to:

- Archaeometry
- Geoarchaeology
- Bioarchaeology
- Zooarchaeology
- Paleoethnobotany
- Archaeogenetics
- Archaeometallurgy
- Ceramic archaeology
- Lithic analysis
- Chronological dating
- Isotope archaeology
- Conservation science
- Underwater archaeology
- Landscape archaeology
- Experimental archaeology
- Digital archaeology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Archaeological Science**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	November 18th, 2026
Publication Date	January 2027
