

Special Issue on Medical and Molecular Imaging

Call for Papers

Medical and Molecular Imaging studies technologies that visualize the structure, function, and molecular processes of the body for diagnosis, monitoring and research. It includes imaging methods such as MRI, CT, ultrasound, PET and optical imaging. The field integrates medicine, biology, physics and engineering to improve disease detection, treatment planning, and understanding of biological mechanisms at tissue, cellular and molecular levels.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Medical and Molecular Imaging**. Potential topics include, but are not limited to:

- Magnetic Resonance Imaging
- Computed Tomography
- Positron Emission Tomography
- Ultrasound Imaging
- Optical and Fluorescence Imaging
- Molecular Imaging Probes and Contrast Agents
- Image Processing and Computational Imaging
- Functional and Brain Imaging
- Image-Guided Therapy and Intervention
- Multimodal Imaging

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Medical and Molecular Imaging**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 7th, 2026
Publication Date	October 2026
