

Special Issue on Homomorphism Research

Call for Papers

This special issue mainly focuses on the discussion of special types of homomorphisms, such as isomorphisms, automorphisms, and endomorphisms. As we know, a homomorphism is a structure-preserving map between two algebraic structures (such as groups, rings or vector spaces). And two homomorphic systems have the same basic structure, and, while their elements and operation may appear entirely different, results on one system often apply as well to the other system. Thus, if a new system can be shown to be homomorphic to a known system, certain known features of one can be applied to each other, thereby simplifying the analysis of the new system.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **Homomorphism Research**. Potential topics include, but are not limited to:

- Homomorphism
- Isomorphism
- Epimorphism
- Monomorphism
- Endomorphism
- Automorphism

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - Homomorphism Research**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	March 12th, 2014
Publication Date	May 2014

Guest Editor:

Prof. **De-Xing Kong**

Zhejiang University, China
