

## Special Issue on Regression Analysis and Application

### Call for Papers

**Regression Analysis** is a statistical process for estimating the relationships among variables. It includes many techniques for modelling and analysing several variables, when the focus is on the relationship between a dependent variable and one or more independent variables.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **regression analysis and application**. Potential topics include, but are not limited to:

- Simple regression
- Polynomial regression
- Multiple regression
- Comparison of regression lines
- Calibration models
- Regression model
- Nonlinear regression
- Orthogonal regression
- Application in business
- Application in medical research
- Application in epidemiology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Regression Analysis and Application**” should be selected during your submission.

Special Issue timetable:

|                     |                   |
|---------------------|-------------------|
| Submission Deadline | August 24th, 2018 |
| Publication Date    | October 2018      |
