**Special Issue on**  
**Agriculture Nutrient Management and Fertilizer**

**Call for Papers**

Most fertilizers that are commonly used in agriculture contain the three basic plant nutrients: nitrogen, phosphorus, and potassium. Some fertilizers also contain certain "micronutrients," such as zinc and other metals, that are necessary for plant growth. Materials that are applied to the land primarily to enhance soil characteristics (rather than as plant food) are commonly referred to as soil amendments. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Agriculture Nutrient Management and Fertilizer**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Agriculture Nutrient Management and Fertilizer**. In this special issue, potential topics include, but are not limited to:

- Fertilizing and conditioning the soil
- Fertilizers made from domestic septage and sewage sludge
- Liquid fertilizers
- Fertilizer storage
- The biological fertilizer
- Nutrient pollution
- Recycling ammonia emissions as fertilizer
- Organic fertilizer
- Fertilizers made from wastes

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - Agriculture Nutrient Management and Fertilizer**" should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 25th, 2026
Publication Date	July 2026
