

Special Issue on Aeronautical and Astronautical Engineering

Call for Papers

Aeronautical and Astronautical Engineering (often collectively termed Aerospace Engineering) is the primary branch of engineering concerned with the research, design, development, construction, testing, and operation of vehicles that operate within and beyond Earth's atmosphere. It is a highly interdisciplinary field that systematically integrates principles from solid mechanics, fluid mechanics (particularly aerodynamics), thermodynamics, astrodynamics, control theory, avionics, materials science, and manufacturing to create complex systems that must perform safely and reliably in extreme environments. The goal of this special issue is to provide a platform for scientists and academics all over the world to promote, share and discuss various new issues and developments in **Aeronautical and Astronautical Engineering**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Aeronautical and Astronautical Engineering**. In this special issue, potential topics include, but are not limited to:

- Aerodynamics and Fluid Mechanics
- Aerospace Structures and Materials
- Propulsion and Energy Systems
- Flight Dynamics and Control
- Space Systems and Astronautics
- Aircraft and Systems Design
- Manufacturing and Industrial Engineering
- Safety, Airworthiness, and Operations
- Emerging and Interdisciplinary Areas

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Aeronautical and Astronautical Engineering**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	October 21st, 2026
Publication Date	December 2026
