

Special Issue on Treatments for Coronary Artery Disease

Coronary Artery Disease also called coronary heart disease, or simply, heart disease, a result of plaque buildup in your coronary arteries -- a condition called atherosclerosis -- that leads to blockages. The arteries, which start out smooth and elastic, become narrow and stiff. The most concerning part of coronary artery disease is that the plaque could rupture, leading to a heart attack and potentially sudden cardiac death.

Medical care is essential once heart disease is diagnosed, with the goals of stabilizing the condition immediately, controlling symptoms over the long term, and providing a cure when possible.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **Coronary Artery Disease**. Potential topics include, but are not limited to:

- Medications Treatments
- Surgery Treatment
- Left Ventricular Assist Device (LVAD)
- Heart Transplant
- Plant-Based Diet for Heart Health

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue – Treatments for Coronary Artery Disease**" should be selected during your submission.

Special Issue timetable:

Submission Deadline	January 22nd, 2014
Publication Date	March 2014
