

Special Issue on Cancer Screening

Call for Papers

Cancer screening is important method for early detection of cancer and precancerous lesions. The common cancer screening methods include blood tests, B-mode ultrasound, X-ray images, Pap smear and mammography. The aim of cancer screening is to provide useful health information that can guide medical treatment. Screening tests should be effective, safe, well tolerated, with low acceptability of false positive and false negative results. In general, cancer screening is risky and should not be done except for medical instructions.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **cancer screening**. Potential topics include, but are not limited to:

- Breast cancer screening
- Cervical cancer screening
- Colorectal cancer screening
- Lung cancer screening
- Prostate cancer screening
- Bowel cancer screening
- Side effects of cancer screening
- Tumor markers

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Cancer Screening**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 21st, 2018
Publication Date	May 2018
