

Special Issue on Nonlinear Model

Call for Papers

A nonlinear model describes nonlinear relationships in experimental data. Nonlinear regression models are generally assumed to be parametric, where the model is described as a nonlinear equation. Typically machine learning methods are used for non-parametric nonlinear regression. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **nonlinear model**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **nonlinear model**. In this special issue, potential topics include, but are not limited to:

- Fitting transformable nonlinear models
- Fitting nonlinear regression models
- Fitting polynomial models
- Fitting models which are nonlinear in the parameters
- Nonlinear regression analysis
- Nonlinear regression models and its applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Nonlinear Model**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 18th, 2026
Publication Date	October 2026
