

Special Issue on Biopolymer Materials

Call for Papers

Biopolymer materials have been widely applied in clinical treatment with excellent mechanical properties, abrasion resistance and processing performance. It can be utilized in artificial blood vessel, pacemaker, tissue engineering scaffold and so on. The advantages on performance and environmentally friendly of biopolymer materials are irreplaceable compared with synthetic polymers. With the development of genetic engineering and tissue engineering, biopolymer materials have become the hotspot of novel materials for research in the world.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **biopolymer materials**. Potential topics include, but are not limited to:

- Chitosan
- Biodegradable
- Hydrogel
- Biocompatibility material
- Drug carrier
- Biomedical polymer materials
- Composite polymer materials

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – biopolymer materials**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 8th, 2018
Publication Date	April 2018
