**Special Issue on**  
**Biomarkers and Therapeutic Targets for Cancers**

**Call for Papers**

A biomarker is a biological molecule found in blood, other body fluids, or tissues which is a sign of a normal or abnormal process, or of a condition or disease. In cancer research and medicine, biomarkers are used to help diagnose conditions, screen for primary cancers, forecast how aggressive a condition is, predict how well a patient will respond to treatment and so on.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Biomarkers and Therapeutic Targets for Cancers**. Potential topics include, but are not limited to:

- MicroRNAs
- Prostate cancer gene expression marker
- Breast cancer biomarkers
- Head and neck cancer biomarkers
- Medulloblastoma biomarkers
- Antisense oligonucleotides mediated therapy
- Plasmid based therapy
- Gene therapy

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Biomarkers and Therapeutic Targets for Cancers**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	August 5th, 2016
Publication Date	October 2016

**Guest Editor:**
