

Special Issue on Cancer Pathology and Genetics

Call for Papers

Cancers are caused by certain changes to genes that control the way our cells function, especially how they grow and divide. They can run in families, but most are not clearly linked to the genes we inherit from our parents. A complete and accurate pathology report is crucial to getting a precise diagnosis and deciding on the treatment plan for cancer. This special issue focuses on clinicopathological, epidemiological, immunophenotypic and genetic aspects of the cancers.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Cancer Pathology and Genetics**. Potential topics include, but are not limited to:

- Beta-catenin
- CXCR4
- E-cadherin
- HER-2
- K-ras
- PI3K
- PTEN
- TP53/P53
- Tumorigenesis
- Genetic changes and cancer
- Hereditary cancer syndromes

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Cancer Pathology and Genetics**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	March 20th, 2018
Publication Date	May 2018

Guest Editor:

Scientific Research
Open Access

Journal of Cancer Therapy

ISSN Online: 2151-1942
