

Special Issue on Cancer Imaging

Call for Papers

Cancer Imaging is an umbrella term that covers the many approaches used to research and diagnose cancer. Originally used to diagnose and stage the disease, cancer imaging is now also used to assist with surgery and radiotherapy, to look for early responses to cancer therapies and to identify patients who are not responding to treatment.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **cancer imaging**. Potential topics include, but are not limited to:

- X-ray imaging
- Ultrasound
- Computed Tomography (CT) scans
- Molecular and Nuclear Imaging (PET and SPECT)
- Magnetic Resonance Imaging (MRI)
- Mammographic imaging
- Virtual colonoscopy
- Image-guided surgery
- Advances in imaging techniques

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Cancer Imaging**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	June 15th, 2018
Publication Date	August 2018
