

Special Issue on New and Renewable Energy Sources

Call for Papers

Renewable energy refers to natural energy that can be produced repeatedly, that is, it will not decrease with its own transformation or human's utilization, such as solar energy, wind energy, biomass energy, hydroelectric power generation (large hydropower and small hydropower), geothermal energy and ocean energy. In renewable energy, there are both conventional and new energy sources. Faced with the increasingly serious energy and environmental problems in the world, the development and utilization of new energy and renewable energy has become the common choice of all countries in the world to ensure energy security, respond to climate change and achieve sustainable development.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **new and renewable energy sources**. Potential topics include, but are not limited to:

- Solar energy
- Hydropower
- Wind energy
- Biomass energy
- Geothermal energy
- Oceanic energy
- Alternative energy
- Clean energy
- Energy economy

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – New and Renewable Energy Sources**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 14th, 2018
Publication Date	August 2018

Guest Editor:

Scientific Research
Open Access

Journal of Power and Energy
Engineering
ISSN Online: 2327-5901
