

Special Issue on
Wastewater Treatment, and Water Reuse
Call for Papers

Wastewater Treatment, and Water Reuse focuses on the treatment, purification, recovery, and sustainable reuse of wastewater to protect water resources and safeguard environmental and public health. It covers physical, chemical, biological, and advanced treatment technologies for removing organic pollutants, nutrients, pathogens, heavy metals, emerging contaminants, and other hazardous substances from municipal, industrial, agricultural, and other wastewater streams. Key areas include water reclamation, resource recovery, decentralized treatment systems, membrane technologies, advanced oxidation processes, biological treatment, and nature-based solutions. The field also addresses water quality management, water security, circular water management, and sustainable strategies for reducing freshwater consumption and environmental impacts.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Wastewater Treatment, and Water Reuse**. Potential topics include, but are not limited to:

- Wastewater treatment
- Water reuse
- Biological treatment
- Physical treatment
- Chemical treatment
- Membrane technologies
- Advanced oxidation
- Nutrient removal
- Pathogen removal
- Emerging contaminants
- Industrial wastewater
- Municipal wastewater
- Water reclamation
- Resource recovery
- Nature-based treatment
- Sustainable water management

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Wastewater Treatment, and Water Reuse**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	December 31st, 2026
Publication Date	February 2027
