

Special Issue on Titanium Materials Research

Call for Papers

Titanium is lustrous transition metal with a silver color, low density and high strength. It is highly resistant to corrosion in sea water, aqua regia and chlorine. The two most useful properties of the metal are corrosion resistance and the highest strength-to-weight ratio of any metal. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **titanium materials research**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **titanium materials research**. In this special issue, potential topics include, but are not limited to:

- Corrosion resistance
- Physical properties of titanium
- Applications of titanium
- Nano titanium
- Titanium composite
- Barium titanate

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Titanium Materials Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 20th, 2014
Publication Date	May 2014
