

Special Issue on Flame Retardants

Call for Papers

Flame Retardants are additional agents mixed in manufactured materials like textiles and plastics, or surface coatings which delay, prevent or suppress the production of flames or the spread of fire. They may stay the original status or react with the base material to form a new material after addition. The categories of flame retardants include flame retardant minerals, organohalogen compounds, organophosphorus compounds and so on.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **flame retardants**. Potential topics include, but are not limited to:

- Flame retardant polymeric materials
- Brominated flame retardant
- Flame retardant composites
- Flame retardant properties of materials
- Flame retardant mechanism
- Preparation and characterization of flame retardant materials
- New prospects in flame retardant materials

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Flame Retardants**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	July 15th, 2014
Publication Date	September 2014
