

## Special Issue on Material Processing

### Call for Papers

Materials processing is defined as the series of steps or “unit operations” used in the manufacture of raw-materials into finished goods. The operations involve a succession of industrial processes with various mechanical or chemical procedures, usually produced in large quantities or batches. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Material Processing**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Material Processing**. In this special issue, potential topics include, but are not limited to:

- Casting, forming and machining
- Bulk deformation processing
- Additive processing and joining technologies
- The evolution of material properties under the specific conditions met in manufacturing processes
- Forging, rolling and extrusion
- Compaction and sintering
- Powder processing (metals and ceramics in powder form)
- Design and behavior of equipment and tools
- Applications for material processing

Authors should read over the journal’s [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Material Processing**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	June 26th 2026
Publication Date	August 2026

**Guest Editor:**

For further questions or inquiries
