

Special Issue on
Powder Metallurgy and Metal Ceramics Research

Call for Papers

Powder metallurgy is a materials processing technology to create new materials and parts by diffusing different metal powders as raw ingredients through the sintering process. Powder metallurgy parts are used in a variety of end products including automobile engines and transmissions, lock hardware, copiers and postage meters, off-road equipment, oil and gas drilling wellhead components. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **powder metallurgy and metal ceramics research**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **powder metallurgy and metal ceramics research**. Potential topics include, but are not limited to:

- Technology of powder metallurgy
- Materials of powder metallurgy
- Superior properties of materials
- Metal ceramics
- Alloy powders
- Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Powder Metallurgy and Metal Ceramics Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	July 20th, 2016
Publication Date	September 2016

Guest Editor:

Dr. Jiyu Fang
