

Special issue on Drosophila Research

Call for Papers

Drosophila is a genus of small flies, belonging to the family of Drosophilidae, whose members are often called “fruit flies”. One species of *Drosophila* in particular, *D. melanogaster*, has been a common and useful organism for studies of invertebrate animals.

Starting with Charles W. Woodworth's proposal of the use of this species as a model organism, *D. melanogaster* continues to be widely used for biological research in studies of genetics, developmental biology, physiology, molecular biology, microbial pathogenesis and life history evolution. The terms "fruit fly" and "*Drosophila*" are often used synonymously with *D. melanogaster* in modern biological literature. The entire genus, however contains more than 1,500 species and is very diverse in appearance, behavior, and breeding habitat.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring ***Drosophila* Research**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue-Drosophila Research**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	September 4th, 2013
Publication Date	November 2013
