

Special Issue on Wetland Ecology Research

Call for Papers

Wetlands are ecological landscapes with abundant biodiversity and serve as one of living environments of human beings, playing important ecological functions in regulating floods, purifying water quality and modulating climate, which have significant effects on climate change, economic development at the local, regional or global levels. Wetlands have been compartmentalized one type of land covers in global change conference. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **wetland ecology research**.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **wetland ecology research**. In this special issue, potential topics include, but are not limited to:

- Groundwater replenishment
- Shoreline stabilisation and storm protection
- Wetland products
- Function of natural wetlands
- Plant community
- Wetland ecological protection

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Wetland Ecology Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	August 27th, 2014
Publication Date	October 2014

Guest Editor:

Dr. Victor R. Savage
