

Special Issue on Forest Ecology and Management

Call for Papers

Forest ecology is an important branch of ecology, which mainly studies the interaction and interdependence between forest organisms and forest environment. Forest ecology is divided into tree ecology, forest population ecology, forest community ecology, and forest ecosystem. Forest management is to expand forest resources, increase its biological yield, and maintain the ecological balance of nature. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Forest Ecology and Management**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Forest Ecology and Management**. Potential topics include, but are not limited to:

- Forest species diversity
- Deforestation and climate change
- Forest environment (climate, hydrology, soil and biological factors)
- Forest exploitation and utilization
- Forest ecology geospatial technologies
- Tropical forest ecology
- Forest biomes (plant, animals and microorganisms)
- Forest ecosystems
- Structural features and geographic distribution
- Regulation and control

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Forest Ecology and Management**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 9th, 2020
Publication Date	August 2020
