

Special Issue on Ecological Restoration

Call for Papers

Ecological Restoration examines the recovery of degraded, damaged, or disturbed ecosystems through scientifically informed interventions that rebuild ecological functions, biodiversity, and long-term resilience. Research in this area addresses the restoration of forests, wetlands, grasslands, rivers, coastal zones, and other natural habitats, with attention to native species recovery, habitat connectivity, soil and water quality, invasive species management, and ecosystem processes. It also considers restoration planning, monitoring and assessment, climate adaptation, nature-based solutions, and the integration of ecological, social, and economic considerations. Advances in restoration ecology provide practical approaches for conserving biodiversity, improving ecosystem services, and enhancing the capacity of ecosystems to respond to environmental change.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Ecological Restoration**. Potential topics include, but are not limited to:

- Forest restoration
- Wetland restoration
- Grassland restoration
- River restoration
- Coastal restoration
- Marine restoration
- Soil restoration
- Habitat restoration
- Biodiversity recovery
- Ecosystem rehabilitation
- Invasive species management
- Native species reintroduction
- Landscape restoration
- Restoration monitoring
- Ecological resilience
- Nature-based solutions

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Ecological Restoration**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	January 22nd, 2027
Publication Date	March 2027
