

Special Issue on Endocrinology

(Research on Endocrinology Collection - Scientific Papers 2017)

Endocrinology is the study of biology and medicine that relates to the endocrine system. Endocrine system is the system that controls hormones, which consists of several glands that secrete hormones directly into the blood rather than into a duct system.

The best scientific projects designed by postgraduates majoring in Endocrinology will be selected to take part in this special issue of the Open Journal of Endocrine and Metabolic Diseases. Relevant issues in the daily clinical practice of Endocrinology will be highlighted, such as rare case reports, reviews on key topics of Endocrinology and Metabolism, new approaches towards old clinical challenges and the current comprehension of prevalent metabolic diseases.

Potential topics include, but are not limited to:

- Diabetes types 1 and 2 and their current clinical approaches
- Dyslipidemia: treatment and perspective
- Obesity, insulin resistance and related disorders
- Polycystic ovarian syndrome
- Hormone homeostasis and hormone replacement therapies
- Molecular pathways and common thyroid diseases
- Unfrequent metabolic diseases

If you have relevant papers to be published, welcome to submit them to this collection through [Paper Submission System](#). Authors should read over the journal's [For Authors](#) carefully before submission.

“**Endocrinology (Scientific Papers 2017)**” should be selected during your submission if you would like to add your research work into this collection.

According to the following timetable:

Submission Deadline	November 15th, 2016
Publication Date	January 2017
