

Special Issue on Operations and Statistical Research

Call for Papers

Operational research (OR) encompasses the development and the use of a wide range of problem-solving techniques and methods applied in the pursuit of improved decision-making and efficiency, such as simulation, mathematical optimization, queueing theory and other stochastic-process models, Markov decision processes, econometric methods, data envelopment analysis, neural networks, expert systems, decision analysis, and the analytic hierarchy process. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Operations and Statistical Research**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Operations and Statistical Research**. In this special issue, potential topics include, but are not limited to:

- Critical path analysis
- Generalized assignment problem
- Bayesian search theory
- Supply chain management
- Cutting stock problem
- Computational techniques related to decision making
- Statistical operations data analysis

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Operations and Statistical Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	September 11th, 2026
Publication Date	November 2026
