

## Special Issue on Applied Optics

### Call for Papers

Applied optics is a branch of optics and photonics that specifically focuses on using light for practical purposes. Such uses include collecting light from the sun and converting it to electricity, processing metals with high-power lasers and developing optical equivalents of electronic circuits. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Applied Optics**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Applied Optics**. In this special issue, potential topics include, but are not limited to:

- Optical technology, photonics, lasers
- Information processing
- Sensing and environmental optics
- Fiber optic sensors
- Medical optics
- Optical image processing, restoration, enhancement

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Applied Optics**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	May 15th, 2026
Publication Date	July 2026

#### Guest Editor:

Prof. Mário F. S. Ferreira, Aveiro University, Portugal.
