

Special Issue on Optical Properties of Materials

Call for Papers

Optical properties characterize the response of materials to incident electromagnetic radiation. For each material, the incident radiation is partially transmitted, partially reflected and partially absorbed. Optical properties that define the material response to the incident radiation can be described as transmissivity, reflectivity and absorptivity. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Optical Properties of Materials**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Optical Properties of Materials**. In this special issue, potential topics include, but are not limited to:

- Aspherical lens technology
- Properties of optical materials
- Transmittance of optical materials
- Reflectance of optical materials
- Optical thin film material
- Applications of optical materials

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Optical Properties of Materials**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	May 9th, 2026
Publication Date	July 2026

Guest Editor:

Prof. Mário F. S. Ferreira, Aveiro University, Portugal.
