Special Issue on Control Engineering

Call for Papers

Control engineering is the branch of engineering that deals with the analysis, design, and implementation of systems that regulate the behavior of dynamic processes to achieve desired performance objectives. It is a fundamentally interdisciplinary field, drawing on mathematics (differential equations, linear algebra, optimization), physics (mechanics, electromagnetism, thermodynamics), computer science (algorithms, real-time computing, artificial intelligence), and domain-specific engineering knowledge. The goal of this special issue is to provide a platform for scientists and academics all over the world to promote, share and discuss various new issues and developments in **Control Engineering**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Control Engineering**. In this special issue, potential topics include, but are not limited to:

- Classical Control
- Modern Control
- Robust Control
- Nonlinear Control
- Adaptive Control
- Optimal Control
- Intelligent and Learning-Based Control
- Networked and Distributed Control
- Process Control
- Mechatronics, Robotics, and Automation

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Control Engineering***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	August 7th, 2026
Publication Date	October 2026
